

# Quelamín<sup>®</sup>

## MULTI

### Inorganic fertilizer (Soluble Liquid)

SCO-189 / X / 18 registratio

#### DESCRIPTION

**QUELAMÍN MULTI<sup>®</sup>** is a concentrated liquid fertilizer — with EDTA, carboxylic acids and amino acids as chelating agents— of very high solubility that provides minerals in an organic form that makes them highly assimilable and usable by plants, whether in foliar or soil form. **QUELAMÍN MULTI<sup>®</sup>** is an excellent source of microelements to correct deficiencies in all crops in general, in a fast and efficient way. The free amino acids in this formulation are absorbed immediately and provide plants with minerals in a much more useful and profitable way, increasing the energy of the plant and consequently reducing the metabolic wear of the process of the elements.

#### DOSAGE AND METHOD OF APPLICATION

Direct application to the ground: Using a backpack or mechanical equipment, it is recommended to use 1 to 5 liters per hectare for all crops. Apply the number of times necessary within the cycle in crops with sprinkler or drip irrigation.

Foliar application: It is recommended 0.5 to 4 liters per hectare per application. It may be accompanied with foliar fertilizers. These applications can be made whenever the crops requires it or according to a nutritional program for stress conditions; as well as when application of growth regulators or insecticides is being made.

#### ADVANTAGE

It is a concentrated liquid fertilizer of very high solubility.

Application in foliar or soil form.

It provides minerals in an organic form highly assimilable by plants, much more useful and profitable.

The free amino acids in this formulation are absorbed immediately.

Increases the energy of the plant.

Decreases the metabolic wasting of the elements process
